

# Centralizing our Information

The ABC's of CRM at PWN

# What is happening?

- PWN's primary work is about building relationships

# What is happening?

- PWN's primary work is about building relationships

- We need to keep track of relationships to do our work.

# What is happening?

- As we grow, the number of relationships grows faster

# What is happening?

- As we grow, the number of relationships grows faster

# What is happening?

- As we grow, the number of relationships grows faster

# What is happening?

- As we grow, the number of relationships grows faster

# What is happening?

- As we grow, the number of relationships grows faster

- **6** people
- **15** pairs
- **64** total relationships

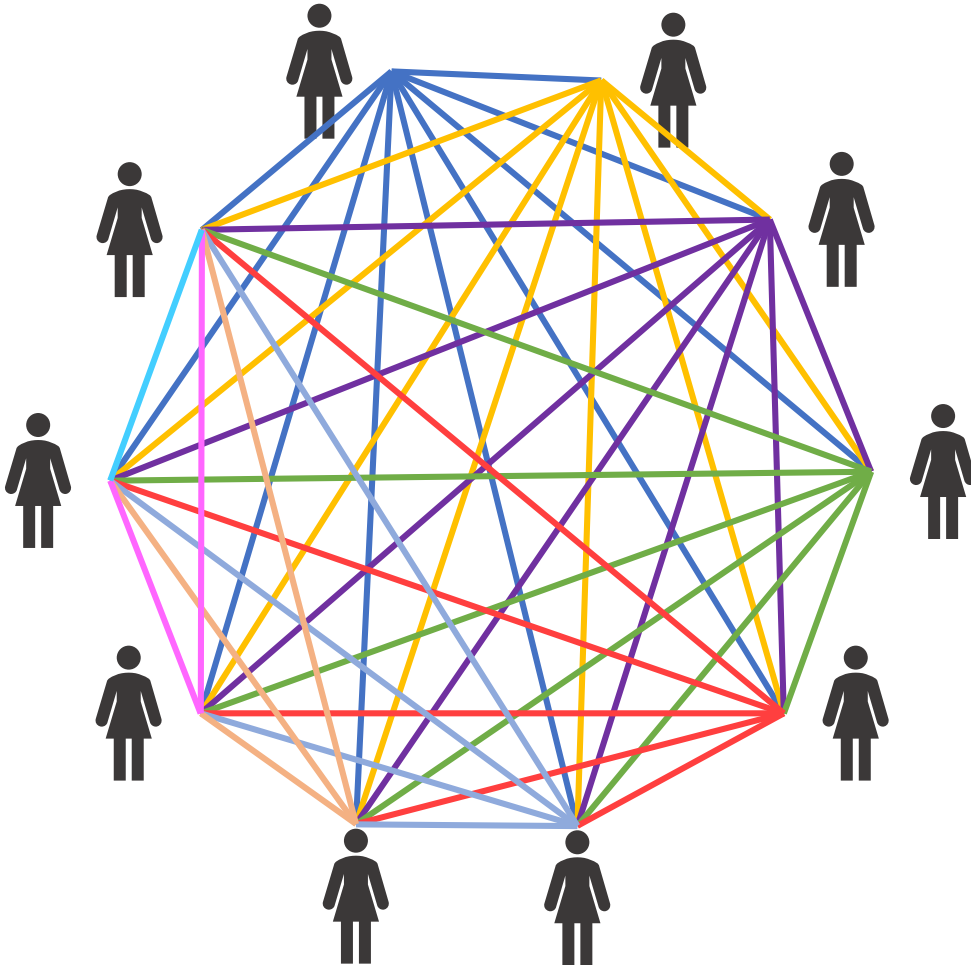

# What is happening?

- As we grow, the number of relationships grows faster

# What is happening?

- As we grow, the number of relationships grows faster

- **10** people
- **45** pairs
- **1024** total relationships

# So what?

- Harder for any 1 person to know everyone

# So what?

- Harder for any 1 person to know everyone
- Mathematically impossible for *everyone* to know everyone (limitation of time)

# So what?

- Keeping track of basic information (name, phone, email) becomes more unwieldy
- We want to know more details, too
- And know about individuals *and sub-groups*

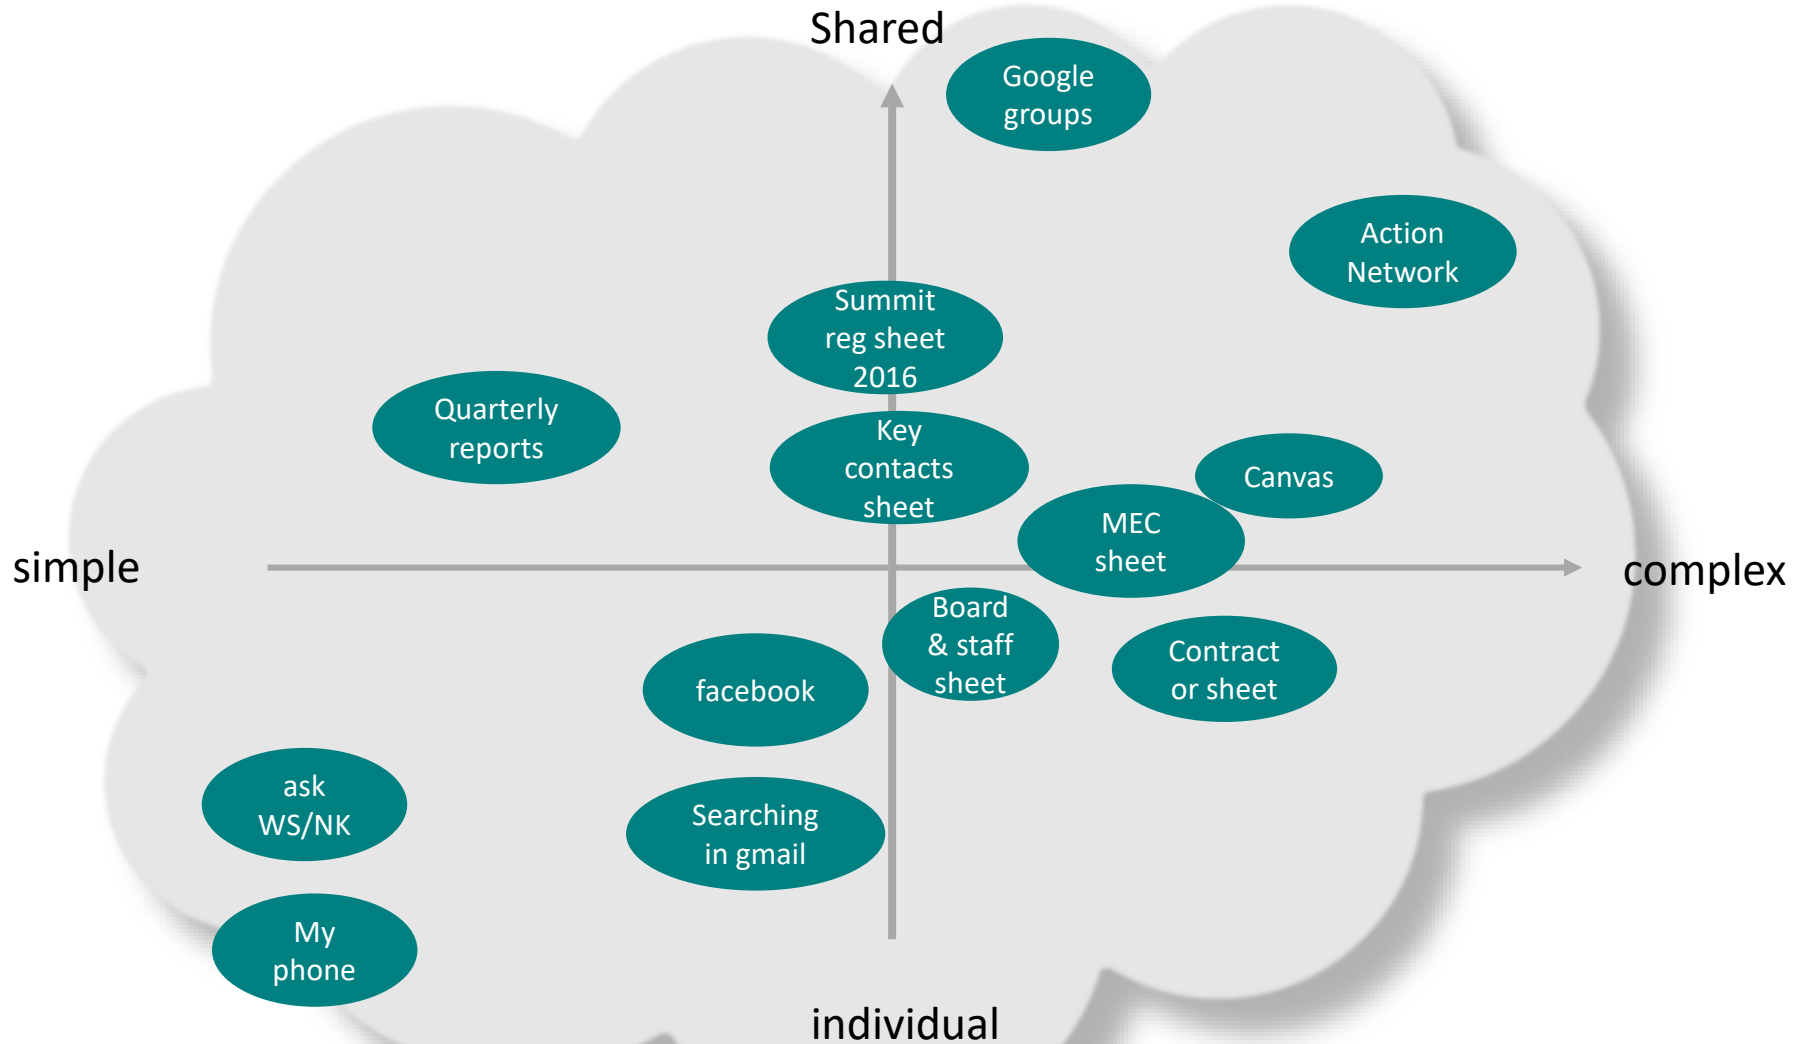

# What's happening at PWN?

- Different people want to know and do different things with different subsets of this information
  - And are therefore using different methods across multiple, incomplete sets of information

# How is this happening?

- With great variation!

# Challenges/Limitations

- **Lag times:** Different data sources are updated at different times, and piece-by-piece
- **Authority control:** which one is the right email address for person x?? Who is a member???
- **Generating sub-lists:** time-consuming, prone to human error, inconsistent
- **Loss risk:** someone accidentally deletes or edits a sheet they shouldn't

# Who wants to know what about whom?

Department	Stakeholder information
Organizing	<ul style="list-style-type: none"><li>• Member contact info (phone, email, mailing address)</li><li>• Member PWN affiliations<ul style="list-style-type: none"><li>• Chapter member? Chapter officer? State lead? Summit presenter? Summit attendee?</li></ul></li><li>• Member organizing activities<ul style="list-style-type: none"><li>• E.g, attended POD call on x date, bird-dogged congressperson on y date, signed petition on z date</li></ul></li></ul>
Policy	<ul style="list-style-type: none"><li>• Records of one-off research support to members</li><li>• Member engagement in campaigns</li></ul>
Comms	<ul style="list-style-type: none"><li>• Member contact info &amp; engagement with emails, webinars, &amp; calls</li><li>• Base, Allies, Donors contact info &amp; email engagement</li><li>• Segmented lists for emails</li><li>• Member photos for use in marketing</li></ul>
Admin/Exec	<ul style="list-style-type: none"><li>• Staff &amp; board contact, travel &amp; food info<ul style="list-style-type: none"><li>• Emergency contacts</li></ul></li><li>• Contractor contact info<ul style="list-style-type: none"><li>• Plus documents (e.g., W9's, invoices, contracts) &amp; contract info</li></ul></li><li>• Funder contact info<ul style="list-style-type: none"><li>• Tied to grant info, incl deadlines &amp; documents</li></ul></li><li>• Donor contact info &amp; donation history</li></ul>

# Moving to Solutions

- **Customer Records Management Database (CRM)**
  - Can do basically anything
  - But require time & expertise to set things up *and maintain*
  - So we can't do everything
    - (sorry, ENFPs)
  - We need to narrow to our **main priorities**

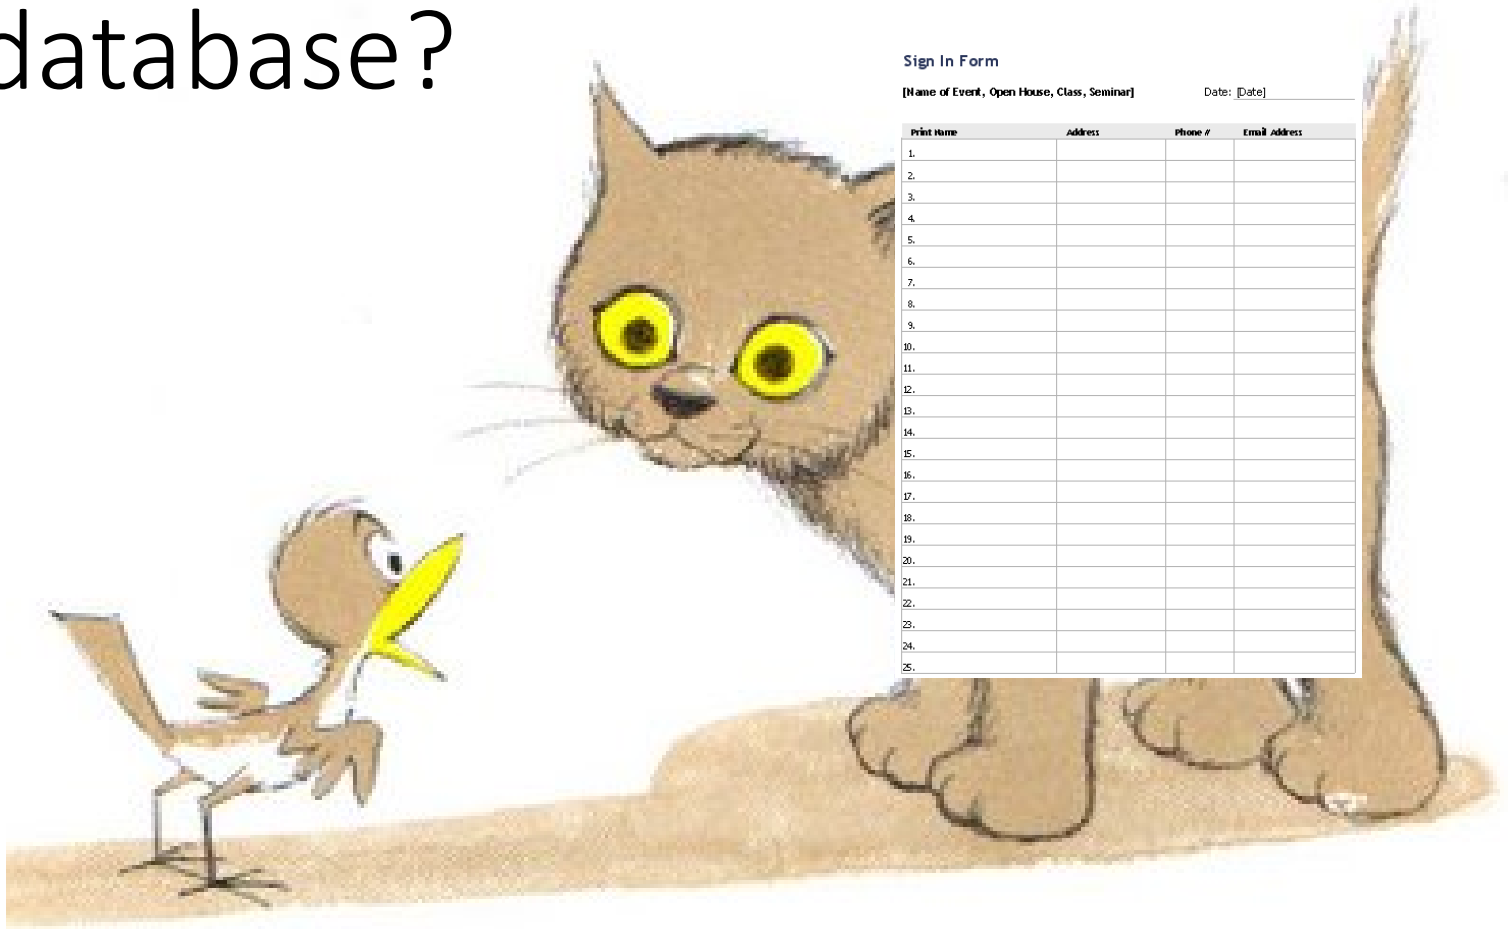

How can one database do all that?

How can one database do all that?

# Printed-out Sign-in sheet, are you a database?

# Printed-out Sign-in sheet, are you a database?

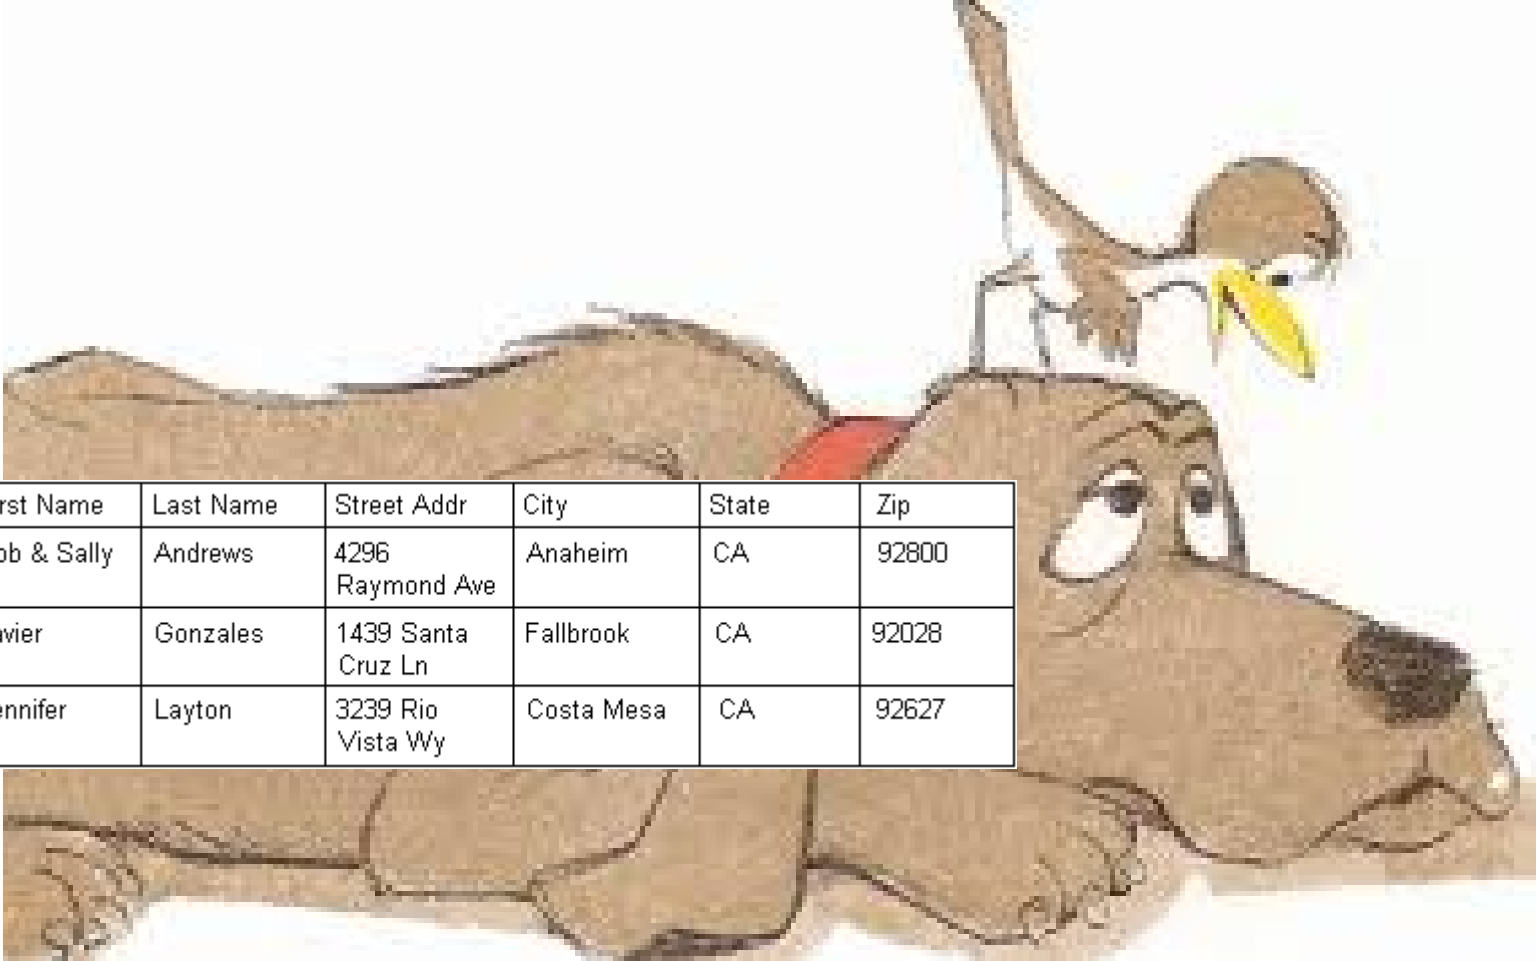

No, but you do have data in you!

# Table in Word, are you a database?

First Name	Last Name	Street Addr	City	State	Zip
Bob & Sally	Andrews	4296 Raymond Ave	Anaheim	CA	92800
Javier	Gonzales	1439 Santa Cruz Ln	Fallbrook	CA	92028
Jennifer	Layton	3239 Rio Vista Wwy	Costa Mesa	CA	92627

# Table in Word, are you a database?

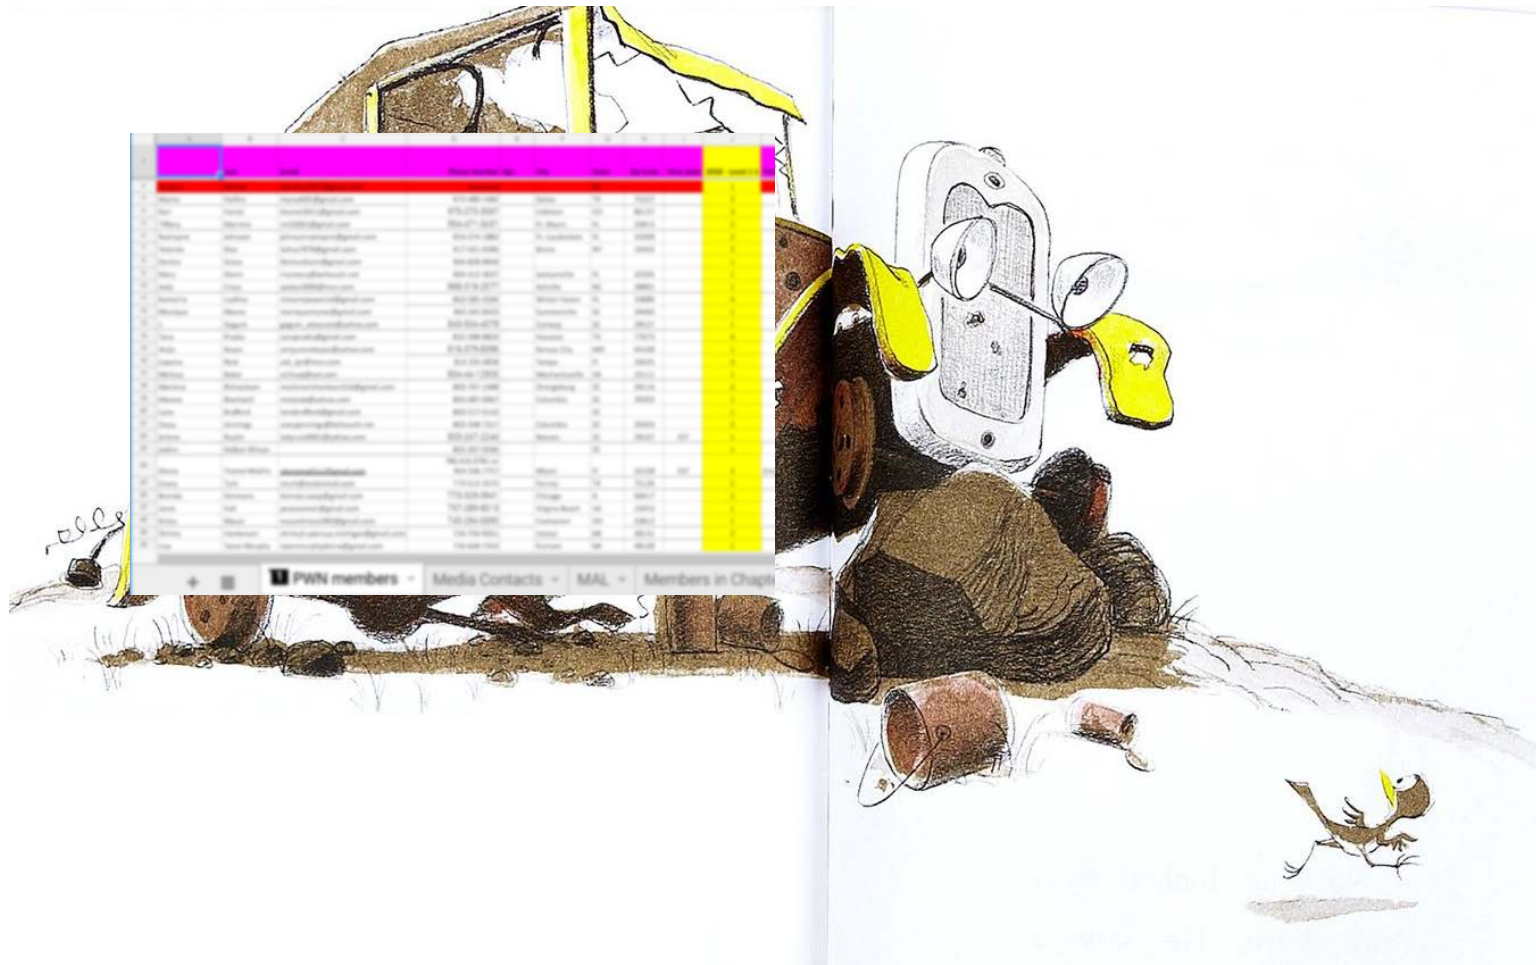

First Name	Last Name	Street Addr	City	State	Zip
Bob & Sally	Andrews	4296 Raymond Ave	Anaheim	CA	92800

No, but your data can go in a DB, too.

# Spreadsheet, are you a database?

# Spreadsheet, are you a database?

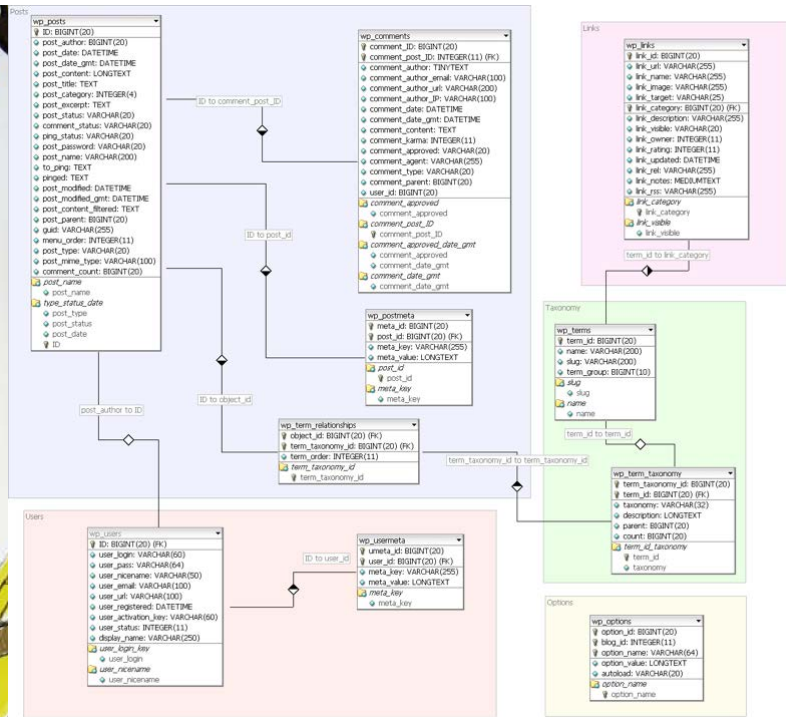

No, but you can store, sort, and manipulate numerical and textual data, and coordinate with other spreadsheets to function as a kinda sorta almost database sometimes when used in very specific ways.

# Big thing, are YOU a database?

He ran right up to it.  
“Mother, Mother! Here  
I am, Mother!” he said  
to the big thing.

You ARE a database! You can connect different fields to make custom lists with different information about related entities! You can store numerical & text data right alongside images and other files! You have customizable levels of user access! You have formal and robust search functions! I knew I'd find you, I just knew it!

# Phase 2: Coming soon!

- Determining specific needs
  - Prioritizing into must-have and nice-to-have
- Exploring options & selecting a solution
  - Considering up-front vs long-term costs, dependability, user-friendliness, and more
- Building & testing!
  - Lots of testing. Lots.
- R-O-L-L-O-U-T!

Thank you!
